The rich ecosystem supports a variety of reptiles, amphibians, and insects, all playing essential roles in maintaining the balance of the park's environment.

About Wildlife.

Wildlife is an essential part of the natural world, contributing to the health and stability of ecosystems. From the dense rainforests to the vast savannas, every habitat supports a variety of species that play specific roles in maintaining ecological balance. Predators keep prey populations in check, herbivores control plant growth, and decomposers help recycle nutrients back into the soil. However, human interference, including deforestation, pollution, and illegal hunting, has severely impacted wildlife populations. Many species, such as tigers, elephants, and rhinos, are on the brink of extinction due to habitat destruction and poaching. Climate change also poses a serious threat, altering weather patterns and disrupting food sources for many animals.

Takahe

Takahe is one of the New Zealand's most iconic and rare birds. Once thought extinct, it has made a comeback thanks to dedicated conservation efforts. This flightless bird, with its large, vibrant plumage and striking red beak, lives in Fiordland's alpine grasslands. The takahē was rediscovered in the 1940s.

Karearea(falcon)

The Kārearea, also known as the New Zealand falcon, is a native bird of prey that is known for its agility and speed. Found throughout New Zealand, the Kārearea is a medium-sized raptor with a streamlined body built for swift flight, capable of reaching impressive speeds when hunting. Falcons are also admired for their behaviour.

Dusky Dolphin

The dusky dolphin is a striking species of dolphin found in the coastal waters of the Southern Hemisphere, particularly around New Zealand. Known for its playful nature and acrobatic displays, the dusky dolphin has a sleek, dark-colored body with a distinctive pale patch on its sides, making it easily recognizable.

The region also hosts the elusive **kiwi**, New Zealand's flightless national icon, often spotted at night in the dense forests. Additionally, **dusky dolphins** are frequently seen in the waters of Fiordland, known for their playful behavior and acrobatics. These unique species, along with many others, make Fiordland a remarkable destination for wildlife enthusiasts and nature lovers alike.
